

# Hardware Requirement Specification

The Hardware Requirements Specification (SRS) captures the complete Hardware requirements for the system, or a portion of the system.

Hardware system requirements often specify the operating system version, processor type, memory size, available disk space and additional peripherals, if any, needed.

**Hardware Requirements:**

- Architecture. All computer operating systems are designed for a particular computer architecture. ...
- Processing power. The power of the central processing unit (CPU) is a fundamental system requirement for any software. ...
- Memory. ...
- Secondary storage. ...
- Display adapter. ...
- Peripherals.

**Hardware Required:**

| Components        | Minimum Requirements (Deployment Server)        |
|-------------------|---|
| Architecture      | x86 / x86_64                                    |
| Processor         | Intel Pentium Processor 2, 2.4GHz or equivalent |
| RAM               | 512 MB  |
| HDD               | 20 GB   |
| Number of Servers | 2 (front-end and back-end)                      |

| Components        | Minimum Requirements (Deployment Server)        |
|-------------------|---|
| Architecture      | x86 / x86_64                                    |
| Processor         | Intel Pentium Processor 2, 2.4GHz or equivalent |
| RAM               | 512 MB  |
| HDD               | 20 GB   |
| Number of Servers | 2 (front-end and back-end)                      |
