Existing System

Introduction to Existing System

Current system, Multiple page Web Application works on the top of ASP.NET with manually coded CSS. ASP.NET is more resource intensive and is strictly dependent upon Windows. Server provider might charge extra for Windows license and other components.

Drawbacks of Existing System

- Do not provides any Search Engine Optimization.
- Is not responsive to small screen sizes, example Mobile Phones and tablets.
- Data Inefficient, each page had many similar parts example navigation bar and footer that are separately retrieved for each page.
- Slow as each page of Web Application is loaded from scratch.
- Inconsistence font size, image alignment, navigation buttons placement and many content overflows.
- Strictly dependent upon Windows.
